There is no strategic cycle route along Agard Street - Provision for people on bikes is therefore of little value.

Supportive of widening for pedestrians, but will not be sufficient width to accommodate people on bikes.

No provision for negotiating junction for active travel users.

Proposal to include footway widening to improve safety for pedestrians and cyclists around the Bridge Steet junction with Agard Street.

Signalised pedestrian crossing upgraded to Toucan and refurbished with hands free demand facility.

Footway buildout to increase visibility of crossing, improving pedestrian safety and reducing traffic speed on approach.

Consider the use of a continuously protected cycleway with the use of kerbline instead of light segregation.

Consideration to be made to how passengers access/egress buses once light segregation is installed.

Unprotected cycleway across and immediately beyond junction with Ford Street

Dangerously narrow advisory cycle lanes adjacent to narrow road lanes

Consider provision for a smooth transition from on-road cycleway to improved existing off-road cycleway

No indication is shown for where city-bound cyclist should go at this point. This is a sign of poor connectivity

Section of advisory cycle lane to be changed to a mandatory facility with light segregation

Raised tables to improve the safety, comfort and attractiveness of the existing shared pedestrian and cycle route.

Proposal to include improved signs and lines to enhance awareness of route 54 / 68 of the National Cycle Network from Vernon Street.

Narrowing of Vernon Street should be considered to reduce crossing width.

City centre-bound cycles should be guided to cross here to join the bus, taxi and cycle lane as the existing route is inadequate.

Consider the abandonment of the poor existing off-road cycleway between Stafford Street and Larges Street

The current provision for cycling into town is poor and doesn't warrant additional signage to advertise this fact.
